#### **WARNING**

This management presentation was prepared as a summary overview only of the current affairs of Planet Green Metals Inc (the "Company" and "Planet Green Metals") and was not prepared for the purpose of assisting prospective investors in making a decision to invest in any security. The Company does not make any representation as to the completeness, truth or accuracy of the information contained in this presentation. The Company expressly warns readers not to rely on this information for investment purposes. The information contained herein is not and should not be construed as either a private or private offer or solicitation to purchase securities in the capital stock of the Company, nor as legal, financial or tax advice. The reader is referred to their professional legal, financial and tax advisors regarding investment related decisions respecting the securities of the Company. No securities regulatory authority or similar authority has reviewed or in any way passed on the accuracy or adequacy of this presentation.

#### FORWARD-LOOKING STATEMENT

Certain statements in this presentation constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 and Canadian securities legislation. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company, or other future events, including forecast production, earnings and cash flows, to be materially different from any future results, performances or achievements or other events expressly or implicitly predicted by such forward-looking statements. Such risks, uncertainties and other factors include, but are not limited to, factors associated with fluctuations in the market price of lithium, uranium, gold, silver, copper and nickel, mining industry risks, recent operating losses, the uncertainty of title to properties, risks associated with foreign operations, environmental risks and hazards, proposed legislation affecting the mining industry, litigation, governmental regulation of the mining industry, properties without known mineable reserves, uncertainty as to calculations of reserves, mineral deposits and grades, the requirement of additional financing, uninsured risks, competition, dependence on key management personnel, potential volatility of the market price of the Company's common shares, dilution and certain anti-takeover effects. Such information contained herein represents management's best judgment as of the date hereof based on information currently available. The Company does not intend to update this information and disclaims any legal liability to the contrary.

### **About Us**

Planet Green Metals Inc. (CSE: PGR) is a Canadian based exploration company focused on battery metals, critical minerals, and precious metals.

Our mission is to contribute to the green transition and the Canadian economy by sourcing projects containing the essential materials needed for a clean energy transition, while also providing a hedge against inflation and economic uncertainty through precious metal exploration.

This vision is underpinned by extensive experience in exploration and development, guided by a management team boasting a wealth of capital markets expertise complemented by a track record of exploration success.

# **Company Highlights**

#### Growth-oriented,

battery metals, critical minerals, and precious- metals-focused exploration company.

Focused team set out to acquire and develop low-cost, high-growth assets that represent key inputs needed to support the global energy transition.

Strong technical and management team with decades of experience in exploration and the capital markets; Capital markets focused integrated with geology expertise.

> Two under-explored properties with upside potential; utilizing modern and high-level methodologies to advance PGR assets. With evaluation and new assets underway.

Attractive capital structure with a supportive and strategic shareholder

base focused on long-term value.

"Our mission is to power the green revolution by sourcing high-quality vital materials essential for a transformative clean energy future!"

projects that provide the

Core projects located in Ontario, which is emerging as a key player in the critical minerals market, with significant reserves and favourable mining regulations; attractive location for exploration and investment.

### **Understanding Lithium**

#### **GROWING DEMAND FOR LITHIUM**

The increasing demand for lithium, driven by its use in batteries for electric vehicles and renewable energy storage, presents a compelling investment opportunity in the exploration and production of this critical mineral.

#### ONTARIO'S LITHIUM POTENTIAL

Ontario, Canada, is emerging as a key player in the lithium market, with significant reserves and favourable mining regulations, making it an attractive location for exploration and investment.

#### **GLOBAL LITHIUM MARKET TREND**

The global lithium market is experiencing rapid growth, with projections indicating a substantial increase in demand over the coming years, creating a favourable environment for investment in critical mineral exploration.

### Demand for Lithium Worldwide (2022-2035)

54.43% **CAGR** with

40.5%

Estimation of year-overyear growth rate in 2023

of the growth will originate from North America

The market is **fragmented** with several players occupying the market share

# Global Lithium Mining Market Set to Surge

**EXPONENTIAL GROWTH FORECAST** 

### USD 22.19 Billion

Global Lithium Market Size 2023 <sup>3</sup>

### USD 26.88 Billion

Global Lithium Market Size 2024 <sup>3</sup>

### USD 134.02 Billion

Projected Global Lithium Market Size. 2032 <sup>3</sup>

#### **GROWTH HIGHLIGHTS**

- 1. Total market share of EVs coupled with hybrid cars is growing to 9.1% in 2023<sup>1</sup>
- 2. Hybrid sales rose 65% vs a 46% gain for EV sales<sup>2</sup>
- 3. Government investment in lithium mining
- 4. increasing demand for consumer electronics
- 5. More economical and efficient EV batteries
- 6. Environmentally friendly applications of lithium

Hybrid sales surged 5X faster than EV sales in February 2024, according to Morgan Stanley. <sup>2</sup>

Toyota saw a nearly 28% increase in hybrid and plug-in sales over the previous year, now making up 30% of their portfolio. Hyundai, Ford, and General Motors are also shifting focus to hybrids, recognizing their growing market appeal.

Lithium-Ion Battery Market Size 2022 to 2032 (USD Billion)

# \$100 Billion

Invested and promised to invest in building domestic cell and module manufacturing by automakers and battery manufacturers by 2030.<sup>1</sup>

# \$16.3 Billion

Volkswagen has pledged over \$16 billion in building a 370-acre battery production site in Ontario: capable of producing 1 million batteries per year at an output of 90 GWh.<sup>1</sup>

# \$10-13 Million EVs

By 2030, North American battery manufacturing capacity will support the manufacturing of between 10 million and 13 million all-electric vehicles per year. <sup>2</sup>

### **Electrification in North America**

### **EXPLORATION PROJECTS IN ONTARIO**

The strategic location of Ontario, coupled with its robust infrastructure and access to skilled labour, positions the province as a prime destination for critical mineral exploration and development.

### **Ontario's Mining Industry by the Numbers**

\$13.5B

Value of mineral production in 2022

\$989M

Spent in 2022 on approximately 300 mineral exploration projects

31,000

Direct mining jobs, plus another 47,000 indirect jobs have been created

Over

376,000

Active mining claims in good standing (as of April 30, 2023)

#### **EXPLORATION PROJECTS IN ONTARIO**

Several companies are actively engaged in lithium exploration in Ontario, leveraging advanced technologies and geological expertise to identify and develop high-potential lithium deposits.

#### **REGULATORY ENVIRONMENT**

Ontario's regulatory framework for mining and exploration provides a stable and supportive environment for companies to conduct lithium exploration activities, ensuring adherence to environmental standards and community engagement.

### The Race for Copper

### **Driving Decarbonization Efforts**

Despite the availability of more cost-effective alternatives like aluminum, copper remains unparalleled in its efficiency and effectiveness for various applications critical for decarbonization efforts.<sup>1</sup>

To meet ambitious net zero targets by 2035, annual copper demand may need to double to 50 million metric tons, according to industry estimates.

### **Hedge Funds' Bullish Bets on Copper**

Andurand Capital Management remains bullish on copper futures as copper surged to record highs last month.

Copper traded in London jumped as much as 30% this year to reach a record in May but has since retreated close to 15% from the high.

Many analysts expect that copper supplies will trail demand in the years ahead as the metal is used in electric grids that will be expanded as part of the transition to clean energy.<sup>2</sup>

Source: Visual Capitalis

### Gold's Outlook & Trends

### **Decade High**

In 2022, gold demand by central banks and other institutions reached a decade high. The increase was brought on largely by global economic uncertainties. Gold's all-time high without inflation adjustments happened on May 20, 2024, when the metal traded at \$2,450.05 per troy ounce.<sup>1</sup>

#### 2024 Gold Outlook

Gold's trajectory in 2023 surprised many investors as the metal remained resilient against traditional macroeconomic headwinds. In 2024, we believe a number of macroeconomic factors will positively influence gold prices:

#1: Shifting Monetary Policy Supports Gold#2: US Dollar Headwinds Could Benefit Gold#3: Investors Turn Bullish on Gold as Volatility Rises

#### Gold Remained a Standout Global Asset Class in 2023

# Corporate Growth Strategy

#### **PROJECT GENERATION**

Planet Green Metals aims to acquire a minimum of 5 properties a year through various deals with prospectors, staking land, or purchasing property from other exploration companies at favorable terms.

#### **ROYALTIES**

Planet Green Metals plans to be a revenue-generating entity through the monetization of its exploration assets as the Company evolves.

Royalty companies offer equity investors diversified exposure to commodity prices while mitigating downside risk given limited exposure to operating and capital costs. This model typically produces "only good news."

#### **CRITICAL MINERALS IN ONTARIO**

Ontario has garnered substantial investment, exceeding \$28 billion, particularly in the realm of automotive and electric vehicle (EV) manufacturing. As the demand for EVs and hybrid vehicles continues to surge, there is significant demand expected for a local, reliable source of battery and critical minerals to sustain the automotive manufacturing sector in Ontario.<sup>1</sup>

### **De-Risked Strategy**

# **Driving Future Growth: Strategic Acquisitions** and Portfolio Expansion

- ✓ High-quality projects provided to us via prospectors and staking
- Projects evaluated internally by an experienced geoscience team
- ✓ Projects evaluated for financial backing by a management team with capital markets expertise
- ✓ High-quality exploration program defined, with an appropriate ore deposit model established
- Source and vet the highest-quality joint venture/earn-in partner that can raise capital, to conduct technically excellent exploration program
- Advisory team put in place to monitor exploration programs carried out by various partners
- ✓ Mutually beneficial agreements can be reached with local First Nations at the beginning of the project

### **Marion Property**

### INTRODUCTION

The Marion property is located 270 km north-northwest of Thunder Bay, and 100 km southwest of Timmins and consists of fifty-three (53) unpatented mining claims located in the Province of Ontario.

Geologically the Marion Property contains a number of lithological and structural features that makes it a compelling target for gold exploration. The historic trenching of the property identified 12.75 g/t Au over 9.15 m, and 135 m along strike the structure contained 2.18 g/t Au over 9.75 m (Domego Resources Ltd, 1979).

### **REGIONAL & PROJECT GEOLOGY**

The property is underlain by a sequence of sedimentary, felsic and mafic volcanic and volcaniclastic rocks of the Swayze greenstone belt. This belt hosts the Côté Lake gold mine, which contains reserves and resources of 7.61 Moz Au (1.03 g/t Au), and 12.07 Moz Au (0.89 g/t Au), respectively, and is hosted in tonalite intrusions (IAMGold Annual Report, 2023). The primary mineral deposit type being targeted on the property is gold-rich volcanogenic massive sulphides

Gold mineralization is also associated with a 15 m thick banded iron formation, which is an excellent host for exhalative and structurally controlled precious metals. The Marion property also contains tonalite intrusions, which will be investigated for Côté Lake style gold mineralization. Geologically the Marion Property contains a number of lithological and structural features that makes it a compelling target for gold exploration.

### **Sheraton Property**

### INTRODUCTION

The Sheraton Property is located 25km southwest from Matheson, Ontario, with excellent access via a network of forestry. The Sheraton Property consists of fifty-eight (58) unpatented mining claims located in the Province of Ontario.

The property covers the geological contact of a sequence of felsic to intermediate volcanic and volcaniclastic rocks of the Wawa-Abitibi greenstone belt, which is highly prospective for Cu-Zn±Au±Ag VMS-style mineralization.

### PROJECT GEOLOGY & PAST EXPLORATION

Exploration by Cross Lake Minerals in the late 1990s on the adjacent property at Cross Lake identified bedded sulphides containing zinc grades ranging from 1% to 6%, with local high-grade pods containing up to 18% Zn over a true width of 3 m, with silver values ranging up to 911 g/t Ag. Copper grades of 1% to 3% were encountered overestimated true widths of up to 12 m (Vaillancourt, 2001).

The mineralization represents VMS style, and Planet Green will look for similar critical and precious metal mineralization on the Sheraton Property. The presence of significant copper mineralization at the adjacent Cross Lake property makes the Sheraton Property a compelling target.

# **Rich Lake Property**

### **INTRODUCTION**

The Rich Lake property is located 365 km north-northeast from Thunder Bay and 17 km west of Fort Hope, Ontario and consists of one hundred (100) unpatented mining claims in the Province of Ontario.

The two claim blocks straddle along strike Separation Rapids Limited's lithium, tantalum, cesium pegmatite Lilypad Project, where exploration identified several wide mineralized pegmatite dykes.

### **PROJECT GEOLOGY**

The geology on the property is also prospective for gold mineralization, as highlighted by drilling in 1987 on geophysical anomalies that returned grades as high as 28.11 g/t Au over 1.5 m in sheared mafic tuff on adjacent claims (Naramco Explorations, 1987).

Similar lithologies are present on the Rich Lake Property, along with other favourable targets such as iron formations. The Company's technical team believes the Rich Lake Property has excellent potential to host multiple styles of critical and precious minerals.

# **Grenfell Property**

### **INTRODUCTION**

The Grenfell Property is located 13 km west-southwest from Kirkland, Ontario, and has year-round access via Highway 11 and the Trans-Canada Highway

The Grenfell Property consists of four (4) unpatented mining claims located in the Province of Ontario.

### **REGIONAL & PROJECT GEOLOGY**

The property is located immediately north of the Kirkland Lake "Main Break" fault, which hosts several mines such as Agnico Eagle's Macassa gold mine (6 Moz Au produced, and a mine reserve of 2.25 Moz Au (Agnico Eagle Annual Report, 2023)),located 8 km to the east.

The geology of Grenfell is underlain by a thick sequence of sheared massive and pillowed mafic flows of the Wawa-Abitibi greenstone belt. These rocks host auriferous quartz-carbonate veins that are possible splays structures, likely associated with the Kirkland Lake "Main Break" fault. The veins are promising gold target zones, representing an entry point for Planet Green into this renowned gold district.

### **Jeannette Lithium**

### **INTRODUCTION**

The Jeannette Lithium Project is situated approximately 84km northeast of the town of Ear Falls and 105km east of the mining community of Red Lake, Ontario. Spanning across 1,820 hectares, this property encompasses 4 claims that hold potential for the discovery of spodumene bearing pegmatites.

This Project is located in a Tier-1, low-risk mining jurisdiction near excellent infrastructure with recent discoveries in the area.

# Jeannette Lithium: Historical Work

During the 2022 grass roots field program program 113 grab and channel samples were collected returning values up to 244 ppm Li, which was obtained from a sample of biotite gneiss with coarse feldspar-quartz dykelets. 45 grab samples were collected during the June and July field programs, which returned values up to 290ppm Li and 688ppm Rb. The value of 290 ppm Li was obtained from biotite gneiss proximal to the sample which had earlier returned 244 ppm Li. The value of 688 ppm Rb was obtained from pegmatite on the south shore of Tarpley Lake in the northeastern part of the Project

An additional 44 grab samples were collected during the August 2023 program. These returned up to 309 ppm Li and up to 497 ppm Rb. The value of 309 ppm Li was obtained from biotite gneiss proximal to samples which had earlier returned 244 and 290 ppm Li. The value of 497 ppm Rb was obtained from pegmatite approximately 2 km south of Tarpley Lake in the eastern part of the Project.

# Jeannette Lithium: Exploration

#### **HELIBORNE MAGNETIC SURVEY**

A high-resolution heliborne magnetic survey was completed on the project by Prospectair Geosurveys. (April 30 – June 6, 2022.)

#### **GEOLOGICAL MAPPING & SAMPLING**

19 bulk rock samples were collected from various pegmatites within the batholith in 2001 by the Ontario Geological Survey. (May – June 2022.)

#### **CHANNEL SAMPLING**

113 grab and channel samples were collected returning values up to 244ppm Li (2022 field program). 16 grab samples were collected and received during the June 2023 program, with additional prospecting and exploration programs planned

### Jeannette Lithium

### **REGIONAL & PROJECT GEOLOGY**

The Jeannette project is host to the Allison Lake batholith fractionation corridor and rare earth element enrichment as determined by elemental analysis and mineral observation in outcrop by Breaks et al. 2003.

The SJ Pegmatite on the shore of Jubilee Lake is evidence that the Allison Lake batholith has produced external pegmatite dykes.

The Allison Lake East project is located in Northwestern Ontario where numerous lithium deposits have been delineated to host significant reserves of Li<sub>2</sub>O.

Of significance is that the Li-deposits/projects of northwestern Ontario are located within 10-20km of a terrane boundary. These terrane boundaries are deep seated sutures that divide accreted Archean terranes and act as conduits for fertile peraluminous granites. The Project is 20km north of the English River-Uchi Terrane boundary.

### **Harrison Road Lithium**

### INTRODUCTION

The Harrison Road Project consists of 38 mining claims comprising 6,080 hectares and is located 90km northeast of Sioux Lookout, Ontario with easy highway and logging road access and good outcrop exposure.

The Project occurs within 6km of a sub-province terrane boundary, an integral relationship between lithium deposits and structure. Lithium-bearing or LCT-pegmatites can occur up to 10km away from their parental granite.

### **Harrison Road Lithium**

### HISTORICAL MAPPING & EXPLORATION HISTORY

Planet Green Metals has conducted a heliborne magnetic survey and a sampling program, with plans for an extensive LiDAR survey and follow-up program in 2024.

Mapping by OGS in 1980 noted numerous tourmaline occurrences in the metasediments proximal to muscovite-bearing granites within the area.

"In most cases the presence of abundant tourmaline in metasedimentary and metavolcanic rocks indicates the close proximity of a pegmatite". (Beusetal., 1968, Cerny 1989)

Observations from the 1990's and earlier have noted tourmaline occurrences indicative of pegmatite proximity, reinforcing the lithium prospectively of the area.

Preliminary surveys have shown elevated lithium levels in lake sediment samples within the property, higher than those around the known Root-McCombe pegmatite field.

Nation Talk 24

### **Harrison Road**

### **REGIONAL & PROJECT GEOLOGY**

The Project lies just south of the Root Bay pluton hosted within metasediments. The Root Bay Pluton is a muscovite-bearing granite, an S-type peraluminous fertile parental granite.

Breaks concluded that the Root Bay pluton is the parental granite to the McCombe-Root Lake pegmatite field and lithium deposit currently being drilled by Green Technology Metals located 10 km to the northwest.

The Project occurs within 6 km of a sub-province terrane boundary, an integral relationship between lithium deposits and structure. Lithium-bearing or LCT-pegmatites can occur up to 10 km away from their parental granite.

Elevated lithium lake sediment sample results by the OGS within the Project suggest nearby sources, compared to the lake sediment results around the Root-McCombe pegmatite field, the Property has higher elevated lithium results.

### Management

#### Jeremy S. Brett, M.SC., P.GEO

DIRECTOR, PRESIDENT & CEO, SENIOR GEOPHYSICIST

Mr. Brett is a Senior Geophysical Consultant with 30 years of international experience in mineral exploration, covering diverse commodities including oil & gas and industrial minerals. He specializes in geophysical methods, geology, ore deposit models, structural geology, and project management. With a B.Sc in Geophysics and an M.Sc in Geology from the University of Toronto, Mr. Brett spent 26 years at MPH Consulting Limited. He has consulted for over 100 Canadian junior and major exploration/mining companies and governments across North and South America, Africa, Europe, and Asia. Mr. Brett has also held board positions at three junior mining companies and served on the Board of the PDAC, chairing its Lands and Regulations Committee. He is a Fellow of the Society of Economic Geologists.

### Robert Turgeon, CPA, BBA

DIRECTOR

Mr. Turgeon has been a CFO for publicly traded and private mineral exploration companies since 2007. He holds a bachelor's degree in business administration-accounting from UQTR University and became a CGA in 1980 (merged with CPA in 2012). Mr. Turgeon also served as a sessional instructor in finance and accounting at UQAT's School of Indigenous Studies for 20 years. Additionally, for the past 18 years, he has provided training and coaching to Cree Native Organizations in Eeyou Istchee Territory, Northern Quebec.

#### Nicholas Coltura, BBA

DIRECTOR

Mr. Coltura brings extensive experience in business development and investor relations for public exploration companies, specializing in marketing, strategic relationship building, and capital raising. He has applied his expertise with firms including Rockridge Resources Ltd. (TSX.V: ROCK) and Skyharbour Resources Ltd. (TSX.V: SYH). Mr. Coltura holds a BBA with a focus in Finance from Simon Fraser University, complemented by coursework in Public Companies: Finance, Governance, and Compliance.

#### **Robert Coltura**

**DIRECTOR** 

Mr. Coltura is a businessman with significant entrepreneurial experience and is President and principal shareholder of Matalia Investments Ltd. Matalia Investments Ltd., a company that provides management consulting, corporate finance and investor relation services to public and private companies. Mr. Coltura has over 25 years of experience with various public companies, holding positions of officer and director of several public companies. Mr. Coltura has a great deal of business development experience and has worked with a variety of companies to strengthen their position within their industry.

### Dr. Sandy Archibald, PH.D., P.GEO DIRECTOR

Dr. Archibald is a Senior Exploration Geologist with over 25 years of experience in mineral exploration across the Americas, Europe, and Africa. His expertise spans gold, base metals, uranium, diamonds, copper-nickel, and battery minerals. He holds a Ph.D. in Economic Geology from McGill University, is a Professional Geoscientist (PGeo) certified by the Association of Professional Geoscientists of Ontario, and is a Fellow of the Society of Economic Geologists. Dr. Archibald has held board and management roles in AIM and TSX(V) companies and served as a director of the Prospectors and Developers Association of Canada for two terms.

# **Advisory Board**

#### Steven Sirbovan, HBA

**ADVISORY BOARD** 

Steven Sirbovan, Principal and Founder of Blink Capital Corp., is an experienced small-cap capital markets professional with over 10 years of experience in investor relations, private equity, and investment banking. Steven spent the last 8 years at Echelon Capital Markets, one of Canada's fastest growing full-service investment dealers, working exclusively with companies in the high-growth, less than \$100M market cap bracket. Most recently, Steven was a Director of Investment Banking and for the last 5 years co-led the Origination Investment Banking group, executing on private and public financings, mergers and acquisitions, and other corporate transactions. Over his tenure at Echelon, Steven was directly involved in hundreds of transactions with an approximate aggregate value of half a billion dollars. Steven's expertise includes raising capital and advising corporate clients in many sectors, including metals and mining, industrials, technology, renewables, healthcare, biotech, consumer products, real estate, among others. Steven is a graduate of the Ivey Business School at Western University in London, ON.

### Perry English ADVISORY BOARD

Referred to as a One-Man Project Generator, Perry was raised in Red Lake and has focused his prospecting career on northwestern Ontario, where he has staked thousands of claims and sold hundreds of properties over the past 40 years. He received the Ontario Prospectors Association's Prospector of the Year Award in 2007 and their Lifetime Achievement Award in 2014. Notably, Perry sold the original 67% of the Dixie Lake gold property to Great Bear Resources. Kinross Gold acquired Great Bear and its flagship Dixie project in 2022 for C\$29.00 per share (~C\$1.8 billion).
